## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

To correct grammatical error, in claim 4, line 8, "a hot-rolling step until a forming step" has been changed to --a hot-rolling step before a forming step-- .

### ***Allowable Subject Matter***

1. Claims 1 to 5 are allowed.
2. The following is an examiner's statement of reasons for allowance: The art of record does not teach or fairly suggest the ferritic stainless steel , as claimed, having good machinability and characterized by a composition containing 0.5 to 6% Cu with one or more of tin and Indium not less than 0.005% in total , wherein the structure has Cu-enriched particles with a concentration of tin and/or Indium not less than 10 mass%, said particles being dispersed at 0.2 vol% or more in a ferritic or martensitic matrix; and its method of making comprising the steps of subjecting said steel to aging within a range of 500-900C for one hour or longer, at least one time after a hot-rolling step and before a forming step to a final product.

3. Applicant has discovered that by adding 0.005 mass% or more of Sn and/or Indium to the claimed stainless steel alloy composition containing 0.5 to 6% Cu, the tin and/or Indium are condensed at a ratio of 10 mass% or more in Cu-enriched particles, and converted to a low-melting Cu-Sn or Cu-In alloy. In short, the low-melting Cu-enriched particles are dispersed as debris with big accumulation of dislocations, so as to promote lubrication between a steel material and a machining tool, resulting in remarkable prolongation of tool life. Criticality of the Cu –enriched particles with concentration of tin and/or Indium not less than 10 mass% and said particles being dispersed at 0.2vol% or more in the matrix, and its process of aging is established by the comparative test data on pages 24 to 38 in applicant's specification.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
